The 3D Carousel prompt

The exact prompt behind the FIZZ soda carousel from the reel.

THE PROMPT

Written for the FIZZ demo. Swap the brand, products and colours for your own.

```
Build FIZZ: a single-file index.html 3D product carousel for a desi soda
brand, "FIZZ · desi soda co.".

STACK
Three.js r160 from CDN (importmap) + GSAP 3.12. Fonts: Anton for big type,
Inter Tight for the UI, Instrument Serif italic.

6 FLAVOURS (each has a dark colour, a bright colour, an accent, a price, an
old price, a tag, a one-line description, 3 chips and its own ingredients)
1. Kala Khatta: deep purple · ₹45 (was ₹60) · Bestseller · black berries
2. Aam Panna: orange · ₹50 (was ₹65) · Summer special · mango cubes and
mint leaves
3. Nimbu Masala: lime green · ₹40 (was ₹55) · Most refreshing · lime slices
4. Kokum: pink · ₹55 (was ₹70) · Konkan coast · kokum halves
5. Masala Cola: brown · ₹45 (was ₹60) · Desi twist · star anise
6. Kesar Elaichi: teal · ₹60 (was ₹75) · Festive edition · saffron strands
and cardamom

THE 3D CANS (geometry only, no models)
- An open cylinder body with label art drawn on a canvas for each flavour:
a gradient in the flavour colours, soft bubbles, a big "FIZZ", the flavour
name, an accent bar, "DESI SODA CO. · 330 ML" and "MADE IN INDIA" running
up the side. Glossy clearcoat material.
- Aluminium top and bottom from LatheGeometry (metalness 1) and a
RoundedBox pull tab.
- RoomEnvironment reflections, ACES tone mapping, a key light and a rim
light.
- Redraw the labels once the fonts have loaded.

THE RING CAROUSEL
- All 6 cans sit on a 3D ring. The selected can glides to the front at full
size and does one full spin; the others wait behind, smaller and tilted,
slowly turning and bobbing.
- Always go the shortest way round the ring (1.1s, power3.inOut).

ON EVERY SWITCH
- The whole background floods to the new flavour's colours (GSAP tweens the
CSS variables of a radial gradient with a subtle noise overlay).
- A giant flavour name behind the cans (Anton, about 17vw) swaps letter by
letter: each letter rises from below with a slight rotation, staggered.
- 14 pieces of that flavour's 3D ingredients burst in with an elastic scale
and orbit the can. Kala Khatta, Nimbu Masala, Kokum and Masala Cola also
get glassy ice cubes (transmission material). The old set blows outward and
disappears.
```

- 160 bubbles keep rising around the can all the time.
- The text in the side panels slides in fresh.

UI (on frosted-glass panels, never on top of the can)
- Nav: the FIZZ logo with an italic "desi soda co.", pill links (Flavours, Story, Stores, Bulk orders) and a cart bubble.
- Left glass panel: tag, description, 3 chips.
- Right glass panel: a huge Anton price in ₹ with the old price struck out, pack sizes ×1 ×6 ×12 and a white "Add to cart →" button.
- Bottom bar: a counter "01 / 06", a flavour dial (a colour dot and the name for each flavour) and ← → arrow buttons.
- Controls: the dial, the arrows, drag or swipe on the canvas, the mouse wheel (throttled) and the arrow keys.
- Autoplay: the next flavour every 4.2s, with a thin progress bar along the bottom edge; any interaction pauses it for 8s.
- Mobile: hide the left panel, move the price panel to the bottom, and the dial shows dots only.

Then open it in my browser.
