Tatkal Rush prompt

The exact prompt behind the Tatkal booking game from the reel: 72 berths, all gone after 10:00:00.

THE PROMPT

Written for the TATKAL game. Change the coach, the timings and the brand line for your own.

```
Build TATKAL RUSH: a single-file index.html game of the 10 AM Tatkal train
ticket rush. One AC 3-tier coach of 72 berths opens at 10:00:00 and every
berth is gone in seconds. The player taps a green berth and books it before
it turns red, and gets CNF, RAC or WL by their time. No images, no canvas:
plain DOM, so it runs at 60 fps on any phone.

STACK
GSAP 3.12 from cdnjs. Google Fonts: Bricolage Grotesque for big words,
Inter Tight for the UI, JetBrains Mono for the clock and timer, Tiro
Devanagari Hindi for a faint "तत्काल" watermark. No WebGL, no backdrop blur,
no 3D layer sorting (those make phones stutter).

THE LOOK
- A night-blue page (#060914) with a soft indigo glow at the top and a
faint dot grid.
- Colours: amber #ffb31a for the clock, green #26d870 for free berths, red
#ff4655 for taken ones, gold #ffd166 for yours.
- Header: a 🚆 tile with "TATKAL RUSH" and "Tomorrow · AC 3-tier · Tatkal
quota" on the left. A split-flap clock HH:MM:SS in the middle: 6 dark tiles
with a split line, amber digits that flip in when they change. A status
line under it. "BERTHS LEFT" with a huge green number and "Coach B4" on the
right.

THE COACH (B4 · AC 3-TIER)
- 9 bays of 8 berths: LB MB UB LB MB UB, an aisle, then SL SU. Each berth
is a rounded tile with its number and type.
- On a laptop the bays run left to right (6 berths stacked, the aisle, the
2 side berths). On a phone it turns: one bay per row, 8 tappable columns.
- The coach is a rounded steel-blue body with window strips along its
edges, tilted back with rotateX(24deg) in a 1700px perspective, with faint
rails behind it.
- A berth is taken with a quick flip: rotationX to 88deg, switch it to red,
flip back with a little bounce.

THE OPENING (what a visitor sees first)
- The clock ticks 09:59:57, 58, 59, then 10:00:00 with a warm flash.
- Every berth flips red in a seeded wave in under a second while the
counter races from 72 to 0. The note says "All 72 berths gone in 0.9 s".
- A red rubber stamp "WL 147 · WAITING LIST" slams down at an angle and the
screen shakes.
- Then a card: "Can you beat Tatkal?", "Berths open at 10:00:00 and vanish
```

in seconds. Grab a green one and book it before it's gone.", and a big gold Start button.

A ROUND

- Start: the clock shows 09:59:58, ticks to 59, then 10:00:00 and a big "TATKAL OPEN!" banner. A timer pill starts under the clock ("⏱ 1.40 s").
- Other passengers take berths in a seeded order that speeds up, so every berth is gone 2.4 s after opening (berth i goes at 2.4 x ((i+1)/72)^0.75 s).
- Tapping a berth before 10:00:00 only shakes the coach: "Not open yet! 😤".
- Tap a green berth: it turns gold and is held for you. A booking card slides up: "Berth 27 · UB", "Coach B4 · Tatkal quota" and a big BOOK NOW button.
- BOOK NOW: a spinner card, "Booking… Please don't press back 🙏", for 1.4 s.

THE RESULT

- Your time is from 10:00:00 to the BOOK NOW tap.
- 1.2 s or less: CNF in green, "Bach gaye! Confirmed 🎉". Up to 2 s: RAC in amber. Slower: WL n in red, n = round(8 + (time - 2) x 11), so 4.2 s gives WL 32, "Phir bhi waiting! 😭". No berth before they all go: REGRET.
- The result card: the status stamp slamming in, the time big in JetBrains Mono, "Picked a berth at 1.3 s · booked at 4.2 s", and two buttons: Try again and Challenge a friend.

CHALLENGE A FRIEND

- It builds a link with the time (?t=4.2) and the message "I booked Tatkal in 4.2 s and still got WL 32 😭 Can you beat me? 🚆".
- It opens the phone's share sheet (navigator.share). Laptops and Instagram's in-app browser on Android have none, so there it opens WhatsApp (wa.me) with the message and the link on its own line, and copies the link.
- A friend who opens a link with ?t= sees "Your friend took 4.2 s and got WL 32. Beat that! 🚆" on the Start card.

ALSO

- Small sounds made in the browser (a tick, an open chime, soft clicks, a stamp thud, a win jingle), only after the first tap, with a 🔊 toggle.
- Seeded randomness only, so every round plays the same order.
- window.intro(), window.demo({pick, book}), window.title() and window.reset() so the page can be driven for a screen recording. ?still turns off the autoplay.
- Works on phones (portrait) and laptops (landscape).
