The 3D Pen Website
prompt + skills

The exact skills and prompt behind the INKLINE website from the reel.

1 · THE SKILLS

```
$ npx skills add greensock/gsap-skills --skill gsap-core gsap-scrolltrigger
```

gsap-core GSAP tweens, easing, stagger
gsap-scrolltrigger scroll-linked animation

```
$ npx skills add cloudai-x/threejs-skills --skill threejs-geometry threejs-materials threejs-animation
```

threejs-geometry building 3D shapes from code
threejs-materials PBR materials, metal, clearcoat
threejs-animation procedural 3D motion

```
$ npx skills add mengto/skills --skill build-awwwards-quality-sites webgl-3d-object webgl-landing-steering
```

build-awwwards-quality-sites art direction, layout, motion
webgl-3d-object a real 3D hero object
webgl-landing-steering keeps a 3D landing page premium and fast

2 · THE PROMPT

Written for the INKLINE demo. Swap the brand, product and copy for your own.

```
Build INKLINE: a single-file index.html website for a luxury hand-made fountain pen brand from Jaipur. Use my installed skills: build-awwwards-quality-sites, gsap-core, gsap-scrolltrigger, threejs-geometry, threejs-materials, threejs-animation, webgl-3d-object, webgl-landing-steering.

STACK
Three.js r160 from CDN (importmap) + GSAP 3.12 + Lenis smooth scroll.
Fonts: Inter Tight (900 for headlines), Instrument Serif italic for accent words, Caveat for handwritten notes.

THE 3D PEN
- A realistic fountain pen built only from geometry, on a fixed transparent WebGL canvas above the page (pointer-events: none).
- Barrel, section, end cap and cap from LatheGeometry: orange lacquer (MeshPhysicalMaterial, clearcoat 1) and navy. Gold rings (TorusGeometry), a gold clip (TubeGeometry on a curve) with a bead at the end.
- A real nib: a THREE.Shape outline with a breather hole and a slit, extruded thin and bent around the pen axis, polished gold (metalness 1),
```

with a black feed under it.
- RoomEnvironment reflections (PMREM), ACES tone mapping. Put the nib tip at the group origin so the tip can be placed exactly.

THE MAGIC: THE PEN WRITES ON THE PAGE AS YOU SCROLL
- On the first bit of scroll the cap slides off and flies away.
- Mark elements with data-stroke="underline | circle | box | check | tick | strike | scribble | arrow | star | sign". For each one, generate a hand-drawn SVG path in one SVG overlay: wavy underline, loose oval, sketchy box, check marks on list items, ticks on FAQ rows, a double strike-through, a highlighter scribble behind quotes, an arrow into a button, a star.
- Draw each path with stroke-dashoffset, and move the pen so the nib follows the ink: getPointAtLength, then raycast that screen point onto the z=0 plane.
- Schedule by rows: a row of marks is written while it sits between 78% and 28% of the viewport height, left to right, and a row never runs past the start of the next row, so nothing is written after it has scrolled away.
- Between marks the pen lifts and glides along a soft arc with no ink. When nothing is being written it hovers beside the last mark and floats.
- The pen tilts into a writing angle while writing, with a tiny nib jitter while inking.
- Handwritten Caveat notes fade in when the mark next to them finishes (a myth gets struck out, then "not this one." appears).
- The page scrolls at 0.4x speed so the pen has time to write: main is position: fixed and moved with translate3d, and a spacer div gives the page its scroll height.
- At the very end the pen signs "NIS" as one stylish signature with an underline swash.

THE PAGE (dense magazine layout, real Unsplash photos)
- Fixed blurred nav: INKLINE + links + an "Order · ₹12,499" pill.
- Hero: giant uppercase "Write bolder.", a lead line, pills, an order button and 4 stats (500 pens, 14k gold nib, 120h, ∞ tuning).
- A tilted, scrolling marquee.
- "Issue 01 · The craft": 3 photo cards (material, hands, nib).
- 4 big stat cards (one orange, one dark).
- "From the atelier": photo mosaic with caption pills.
- A big idea card + an "In the box" checklist.
- "Myths we cross out": 3 myths that get struck out, each with a handwritten truth.
- "How it's made": 5 numbered steps.
- "Loved by writers": 3 quotes.
- "Pick yours": 2 price cards (₹12,499 and ₹18,999), an arrow into the button and a handwritten "worth it."
- FAQ rows, then the final headline "Write something worth keeping." and the signature.

7 COLOUR THEMES
- Every colour is a CSS variable (paper, card, ink, accent, onaccent, soft, muted).
- Themes: Ember, Midnight Gold, Sage, Ocean, Mono Red, Lavender, Forest.
- A floating frosted-glass dock with a swatch per theme and the theme name; the T key cycles themes.
- A theme recolours the whole site, the ink strokes and the 3D pen's lacquer and cap (smooth colour blend).

Make it responsive (smaller pen on mobile), then open it in my browser.
